LATE BATCH BAKERY

WORKSHOP · HOW A WEBSITE WORKS

TELL US ABOUT YOUR WEBSITE

NATALIA MARTÍN MACÍAS · 3º TSDMG · DIGITAL MARKETING STRATEGIES

https://nataliamartinm.github.io/Late_Batch/ HTTPS · LIVE

DOMAIN

What is your website's address and who is the owner?

ADDRESS
`nataliamartinm.github.io/Late_Batch`

TYPE
Free GitHub Pages subdomain. It is a *project site*, so it lives in the sub-path `/Late_Batch/`.

OWNER
`github.io` belongs to GitHub. The subdomain is tied to Natalia's GitHub account. No domain bought, no DNS records.

HOSTING

Where are your files hosted? Which plan and limits?

WHERE
GitHub Pages, from the public repo `nataliamartinm/Late_Batch`, branch `main`, folder `/docs`. No GitHub Actions.

PLAN
GitHub Free. Static files only: HTML, CSS, JS and images.

LIMITS
1 GB site, ~100 GB/month bandwidth, no server code, not for real e-commerce.

SSL

Who issues the certificate and how did you check it works?

ISSUER
Let's Encrypt, wildcard `*.github.io`. GitHub issues and renews it automatically.

VALID
30 Sep 2026 → 29 Dec 2026

CHECKED
Padlock in Chrome; certificate viewer; *Enforce HTTPS* is on, and `http://` redirects with a 301.

HOW I DID IT

Steps, tools and time it took.

1. Plan. Wrote a specification with Claude: pages, catalogue, prices, mobile-first, 100% English, SEO. All open questions answered before coding.
2. Design. Started from the Late Batch design system (colours, Pagkaki + Montserrat fonts, flat style) and a clickable prototype.
3. Build. Claude Code inside VS Code: plain HTML, CSS and JavaScript with no framework. Home, About us, Shop, 9 product pages, checkout, order confirmation and a 404 page. Shopping bag, payment, newsletter and cookie banner are simulated in the browser.
4. SEO. Unique titles and descriptions, canonical URLs, Open Graph, JSON-LD (Bakery, Product, Breadcrumb), sitemap and robots.txt.
5. Publish. Pushed to GitHub, then *Settings → Pages → Deploy from a branch → main /docs*. Every push updates the site in 1–2 minutes.

TOOLS Claude · VS Code · Claude Code · Git · GitHub · GitHub Pages · TIME one afternoon, about 3 hours

WHAT FAILED

What I saw, what I tried and how I fixed it.

Seen: the first push went out under the wrong person. The computer was logged in to someone else's GitHub account, so the commits showed their name and email.

Tried: setting `git config user.name / user.email` and logging in to `gh` as Natalia. New commits were correct, but the old ones kept the wrong author.

Fixed: recreated the history with Natalia as author and force-pushed it.

WHAT I LEARNED

IN SHORT

A static site needs no server: GitHub gives you the address, the hosting and the HTTPS certificate for free. Planning first (spec + design system) made the build fast. On a project site, links must be relative: a link starting with `/` breaks under `/Late_Batch/`.

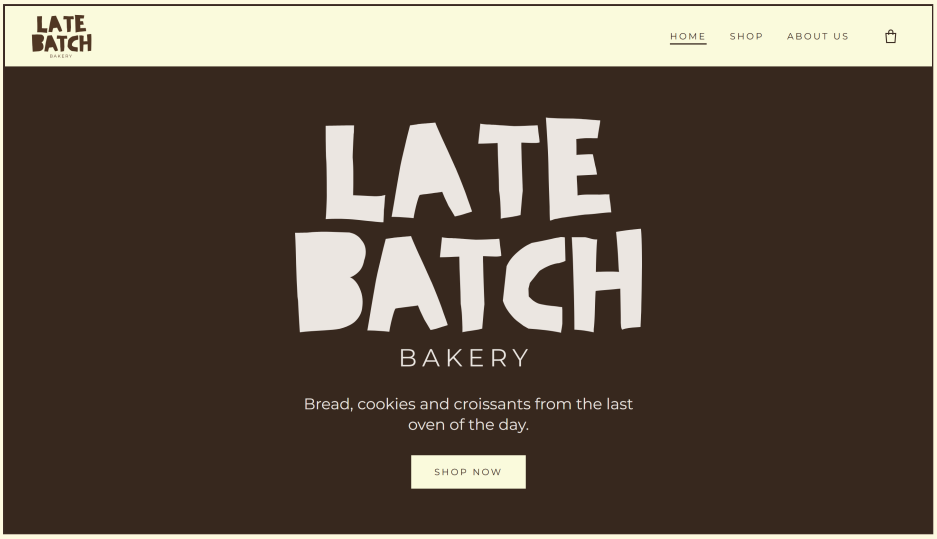

TIP FOR A CLASSMATE

Before your first commit, check who you are: `git config user.email` and `gh auth status`. Fixing the author later means rewriting history.

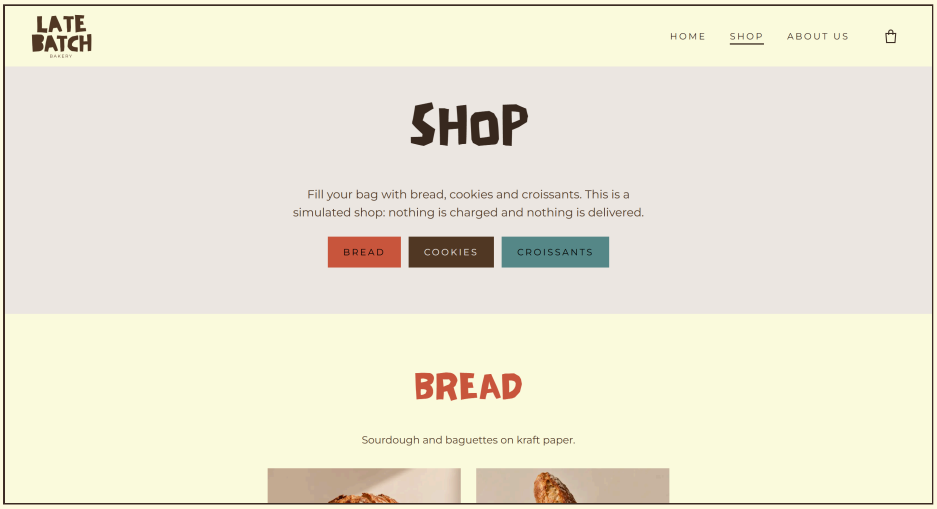

Late Batch Bakery is a fictional brand. The shop is a simulation and charges nothing.

THE SITE, LIVE

SCREENSHOTS · HTTPS · CHECKLIST

Home on desktop: full-screen cover with the logo in the brand colours.

Shop: three categories, each with its own colour (bread, cookies, croissants).

Product page on a phone (390 px): mobile-first layout with a collapsible menu.

HTTPS CERTIFICATE

Subject	`*.github.io`
Issued by	Let's Encrypt
Valid from	30 September 2026
Valid until	29 December 2026 (auto-renewed)
HTTP → HTTPS	301 redirect

GITHUB PAGES

Status	Built ✓
Source	Branch `main` · folder `/docs`
Build	Deploy from a branch (no Actions)
Enforce HTTPS	On
Custom domain	None (free `github.io`)

BEFORE DELIVERING

- [x] The public URL opens without errors
- [x] HTTPS padlock in the address bar
- [x] Looks right on a phone, tablet and desktop
- [x] Links and images work (unknown URLs show the 404 page)
- [x] No broken forms: checkout and newsletter validate and confirm
- [x] SEO title and description on every page, plus a 12-URL sitemap
